**PRODUCT OVERVIEW**

The PM4380 Analog Front End (AFE) is a highly integrated solution for Customer Premises Equipment (CPE) ranging from standalone modems to Residential Gateways. The PM4380 AFE is suitable for VDSL2 and VDSL CPE, and is fully backwards compatible with ADSL2+, ADSL2, and ADSL interface technologies.

The PM4380 AFE achieves industry-leading performance giving DSL service providers the ability to offer faster broadband connections over farther distances. The high degree of integration allows DSL box vendors to build CPE products with lower BOM cost, and in more attractive, smaller form factors.

The PM4380 integrates a high performance 5V line driver and offers extremely low distortion and noise in both transmit and receive paths. The low noise and distortion, combined with high-resolution data converters and integrated programmable receive equalizer and filters, reduce the need for complex and costly external filters to achieve optimum rate/reach performance. In addition, the device integrates a 16-bit digitally controlled crystal oscillator (DCXO), and an optional 1.8V regulator that allows the PM4380 to be used in a system that only provides 3.3V and 5V.

The PM4380 AFE implements PMC-Sierra's AVIS (ADSL2+/VDSL2 Interface Specification) digital interface, which allows flexible connection to a variety of Discrete Multitone (DMT) processors.

**BENEFITS**

- Enables industry-leading rate versus reach performance
- Full backwards compatibility to ADSL2+
- High integration, eliminating the need for a discrete line driver and external power supply and clock components, thereby reducing BOM costs and real estate.
- AVIS flexible digital interface reduces pin-count and provides compatibility with a wide range of xDSL DMT processors.

**PRODUCT HIGHLIGHTS**

**INTEGRATED FUNCTIONS**

- 5V Line Driver delivers +14.5 dBm to the line
- Ultra Low-Noise Amplifier (LNA) and receive chain realize input-referred noise of -150 dBm/Hz
- 16-bit DAC and 16-bit ADC
- Receive bandpass, equalization, and anti-alias filters
- Transmit path gain control (24 dB range)
- Receive path gain control (54 dB range)
- DCXO and PLL clock synthesizer
- Reference frequency and voltage generation
- Linear regulator (1.8V) for digital circuitry (optional)

**ANALOG/DIGITAL BANDWIDTH**

- AVIS 16-bit interface supports 16-bit transfers over nibble-wide bus at speeds of 8.832 MSamples/s (ADSL2+) or 35.328 MSamples/s (VDSL2)
- Transmit path signal bandwidth of 26 kHz to 12 MHz
- Receive signal bandwidth of 138 kHz to 17.664 MHz

**PACKAGE**

- 56-pin QFN EPAD (8 x 8 mm)

**APPLICATIONS**

- VDSL2/ADSL2+ CPE Residential Gateway
- VDSL2/ADSL2+ Integrated Access Devices
- VDSL2/ADSL2+ modem equipment (internal or external)
VDSL2 RESIDENTIAL GATEWAY

ABOUT PMC-SIERRA

PMC-Sierra is a leading provider of high-speed broadband communications and storage semiconductors and MIPS-Powered processors for Enterprise, Access, Metro Optical Transport, Storage Area Networking and Wireless network equipment. The company offers worldwide technical and sales support, including a network of offices throughout North America, Europe and Asia. The company is publicly traded on the NASDAQ Stock Market under the PMCS symbol and is included in the S&P 500 Index.
