PM5990 DIGI-G4 Mobile Fronthaul Solution

Enabling 100G OTN Fronthaul for Converged 4G and 5G Networks

The PM5990 DIGI-G4 Mobile Fronthaul Solution enables high-capacity fronthaul connectivity for converged 4G and 5G centralized radio access networks (C-RANs). The solution breaks new ground by extending 100G optical transport network (OTN) into the RAN to simultaneously aggregate high-density CPRI, 10GE, and 25GE radio links. Microsemi's solution for Mobile Fronthaul networking enables up to a 10× increase in capacity, while introducing innovations that address the need for low latency with link equalization and network security. The platform enables a single architecture that spans today's 4G deployments with built-in support for the transition to 5G.

Unlike conventional WDM solutions that allow for oneradio per WDM link, Microsemi's DIGI-G4 OTN fronthaul architecture allows for the aggregation of multiple 4G or 5G radio links into 100G OTN connections that delivers up to a 10× capacity scaling over existing optical infrastructure.

Differentiated with an embedded optical link security engine, integrated patent-pending real-time link latency equalization, and simultaneous support for 4G CPRI and 5G Ethernet protocols, Microsemi is helping redefine the CAPEX and OPEX cost of ownership paradigm in building fronthaul networks for mobile operators.

Microsemi's Mobile Fronthaul solution can be deployed as an upgrade to existing systems, allowing OEMs to quickly add fronthaul support to existing cards at minimal incremental cost.

Mobile Operator and OEM Benefits

Unparalleled Fronthaul Capacity for 4G and 5G

- Increases fronthaul capacity by up to 10× compared to traditional fronthaul solutions
- Provides 2× 100G fronthaul uplinks supporting simultaneous CPRI and Ethernet clients

Reduced CapEx and OpEx for Mobile Operators

- Enables use of low-cost 100GBASE-LR4 optics
- Simplifies optical transceiver inventory management by optionally eliminating the need for WDM optics

Simplifies Fronthaul Network Deployment

- Uplink and downlink latency measurement and equalization
- Supports fronthaul network protection with configurable latency compensation

Lowest Risk and Fastest Time-to-Market

- Built on Microsemi's production-released and field-proven DIGI-G4 family hardware and software platform
- Enables simple and low-cost upgrade of existing cards to support fronthaul

Fronthaul-Enabled 2× 100G Muxponder

Fronthaul-Enabled 100G WDM Muxponder

PM5990 DIGI-G4 Mobile Fronthaul Solution

Enabling 100G OTN Fronthaul for Converged 4G and 5G Networks

Solution Features

Enabling 100G OTN and Link Security for Fronthaul

- Simultaneous aggregation of 4G and 5G radios into 100G links eliminates the need for WDM optics
- Embedded optical security engine secures links connecting radios to baseband

Future-Proof Radio Protocol Support

- 4G protocols—CPRI option 5, 6, 7, and 10
- 5G protocols—10GE, 25GE, 40GE, and 100GE

Ethernet and Synchronization Features

- 802.3 PCS and MAC
- G.8261 Synchronous Ethernet (SyncE)
- IEEE 1588v2 PTP timing over packet, and PTP over OTN

Uplink and Downlink CPRI Functions

- Per CPRI latency measurement and reporting
- Uplink and downlink latency equalization
- Latency compensation for working and protect paths

Best-in-Class Fronthaul Performance

- Latency as low as 2.5 microseconds
- Up to 75% margin to CPRI jitter spec
- Latency equalization to within nanoseconds

Rich PMON and Carrier-Grade OAM

- CPRI, OTN, and Ethernet layer
- ODUk SNCP and 1+1 Line protectionm
- Compatible with Transponder, Muxponder, and OTN switched deployments

Enabling 4G and 5G Mobile Fronthaul with the DIGI-G4 Family

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for aerospace & defense, communications, data center and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions, security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, California and has approximately 4,800 employees globally. Learn more at www.microsemi.com.
